

Vaccines Cause Adults

Vaccines (Immunizations or Shots) are a vital part of child health and wellness. **Vaccines protect children** from unpredictable and life-threatening illnesses. These illnesses can prevent children from growing into healthy adults. **Vaccines protect your community** by preventing exposure to life-threatening illnesses.

At Mark9 Pediatrics, we follow the CDC recommended vaccine schedule. We do not skip or delay any vaccines unless there is a medical reason.

Prior to any vaccination, you will be informed of the risks and benefits of that vaccine through **Vaccine Information Sheets (VIS)** that are available in the office and can be printed for home use. You will have an opportunity to discuss the risks and benefits of recommended vaccines with Dr. Moemeka during your child's visit.

By joining Mark9 Pediatrics, you are agreeing to follow the recommended vaccine schedule unless there is a medical reason. This agreement makes you aware that if you decline vaccines for non-medical reasons, Dr. Moemeka as a child health and wellness advocate will not be able to continue as your child's PCP. You will be referred to another PCP.
